## COMMON SERVICES CENTERS SCHEME - A MOVEMENT FOR PROMOTING INHERENT ENTREPRENEURIAL TALENT OF RURAL INDIANS

Common Services Centers (CSCs) are an integral component of the Government of India's 'Digital India' initiative. They are the access points for delivery of various e-governance and business services to citizens in rural and remote areas of the country. It is a pan-India ICT enabled network catering to regional, geographic, linguistic and cultural diversity of the country, thus enabling the Government's mandate of a socially, financially and digitally inclusive society.

CSCs offer assisted access of e-services to citizens with a focus on enhancing governance, delivering essential government and public utility services, social welfare schemes, financial services, education and skill development courses, health and agriculture services and digital literacy, apart from a host of B2C services.

CSCs are more than service delivery points in rural India; they are positioned as change agents, promoting rural entrepreneurship and building rural capacities and livelihoods. CSCs are operated and managed by a local level entrepreneur enabling setting up of a rural enterprise and thus creating employment opportunity at the local level.

It was in the year 2014, when the CSC 2.0 scheme was started, that the focus shifted to enabling minimum one CSC in every Panchayat — 2.5 lakhs CSC in three years. CSC, which was a scheme, became a movement to empower citizens, especially those in rural India. Central Government schemes such as PMAY, Swatch Bharat, Ayushman Bharat, PMSYM and PMFBY were enabled to be delivered through CSCs. The turning point was of course the digital literacy programmes — NDLM and DISHA. The Government's vision of promoting a digitally empowered and inclusive society resulted in PMGDISHA programme - to make six crore citizens in rural India digitally literate.

At present, there are 3.20 lakh CSCs across the country and covering almost every Panchayat. These CSCs deliver services such as banking, insurance, pension, education, health and deliver products such as mobile phones, fertilizers, seeds, and consumer products. They also impart skill training on phlebotomy, robotics, mobile repair, and data entry operator. Passport, railways tickets, bill collection and other utility services, including insurance premium collection are also done through the CSCs. In some States, almost all citizen centric services, including the collection of Government dues is done through CSCs. The computing infrastructure of all CSCs has improved significantly, with an average of 3-6 computers per CSCs. About 65,000 CSCs across the country are managed and operated by women.

The Government support for the CSCs resulted in a very vibrant ICT enabled rural enterprise model the largest in the world. A normal scheme by the Government was transformed into "Jan Andolan" for empowering the communities. Most of the government schemes which in the traditional model (GOI - State - district - Block Panchayat) would take years, could now be implemented within few weeks through the use of the CSC network . The implementation of the scheme /programme was carried out not just in short period of time, but ubiquitously without any hindrance. Use of technology in delivery of the service made it not only transparent, but also enabled it to reach the actual beneficiaries.

The CSC scheme has also brought about a transformational change. A large number of educated youth have started business/enterprise in rural India. Many of them left their jobs in urban areas and went back to the village. Women who were educated, and had the talent, got empowered and built commercially viable enterprises through CSC. Almost 1.2 million people got employment through the CSCs, especially in rural India.

With the recognition and support from the Government, the private sector started utilizing the CSC network for selling products and services in rural India. With the formation of District-level CSC Society, the logistic issues which many service providers faced in rural areas will get addressed. It is true that CSCs will become a very effective channel for all the private sector organizations which are interested or want to explore the rural markets.

With the Government's recent announcement of one lakh Digital Villages and Wi-Fi provisioning services through CSCs, the entire movement will be further strengthened in its efforts for transforming Rural India. CSC entrepreneur will support every citizen and enable him/her to meet various requirements of Government or non-Government agencies. There will be at least one digital access point in each of six lakh villages so that the citizen need not travel to Government offices to get various services. These will be delivered to him/her close to the place of residence without any inconvenience. As the entrepreneur is from the same village, the citizen's reliability and his access will be very high - 24 hours. By promoting local employment, CSCs can support in reverse migration of educated persons settling in villages and earning a livelihood.

**Dr. Dinesh Tyagi**

## 7th National Economic Census

The Ministry of Statistics & Programme Implementation (MOSPI) has signed a MoA with CSC SPV to implement surveys/census of MOSPI and information dissemination of various MoSPI schemes through the CSC Network. Accordingly, MOSPI has awarded the project of undertaking 7th Economic Survey of India, 2019 which covers over 27 Crore Households and 7 crore establishments across India through the network of 3 lakh CSCs in both urban and rural areas. This mega project has to be implemented within 3 months. This is first time in India that such a survey is undertaken on a digital platform by using mobile app for enumeration, supervision and generation of statistical reports through the CSCs. This project will build the dynamic business register which will be available for all the central Ministries and State Governments for planning sector specific programmes and schemes for development. For the first time in India, the business register would capture geo coordinates for easy facilitation in developing the GIS based on sector and business attributes as well as future surveys would be made economical and efficient. CSC SPV through its VLE network would be creating a pool of more than 20 lakh Enumerators and supervisors who will be trained on digital platform, certified by CSC SPV and recognized by MOSPI.
